

Lab 6: Agile Project Management using Jira

Objectives:

- To understand Agile project management using Jira.
- To learn Scrum-based project management.
- To create and manage projects in Jira.
- To organize work using epics, stories, and tasks.
- To learn sprint planning and backlog management.
- To track project progress using Jira boards.

Theory:

Jira is a popular Agile project management and issue-tracking tool developed for software development teams. Jira supports Agile methodologies such as Scrum and Kanban.

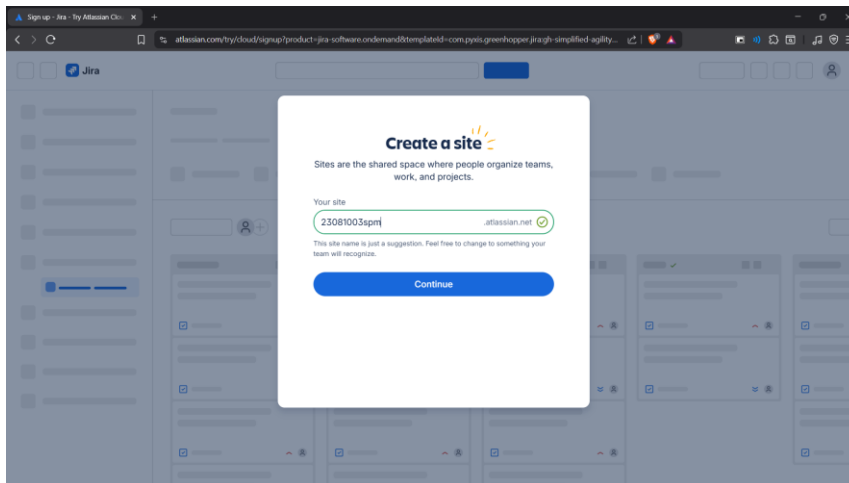

Main features of Jira include:

- Projects for organizing work.
- Epics for large project goals.
- Stories and Tasks for individual work items.
- Backlog Management for prioritizing work.
- Sprint Planning for Agile development cycles.
- Boards for tracking task progress.
- Team Collaboration and task assignment.

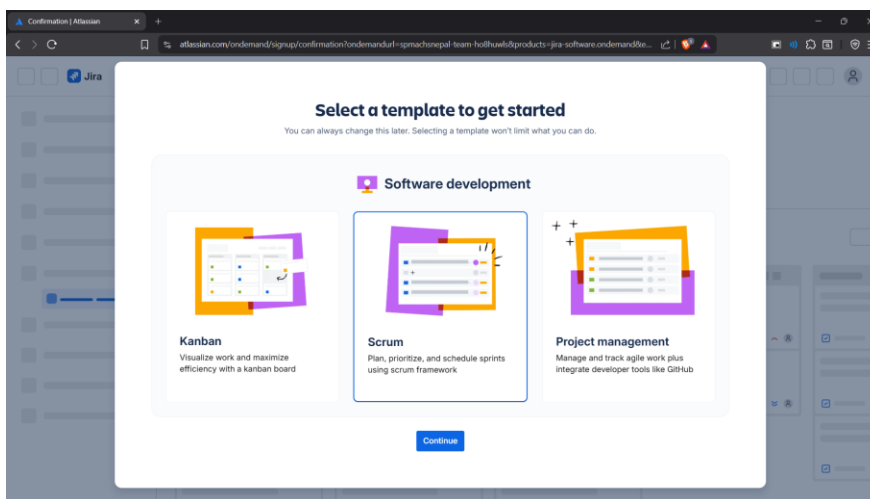

Jira helps teams manage software projects efficiently by tracking progress, assigning tasks, and monitoring sprint activities.

Steps / Procedure:

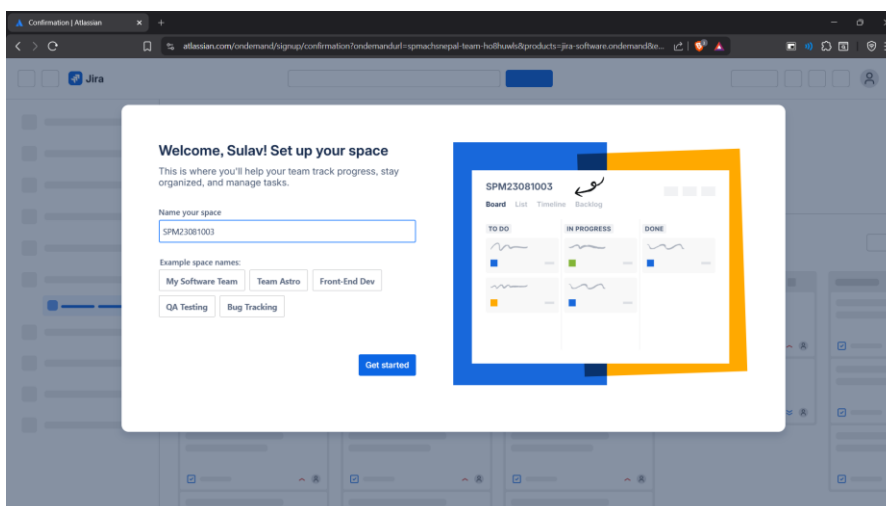

1. Create a New Project

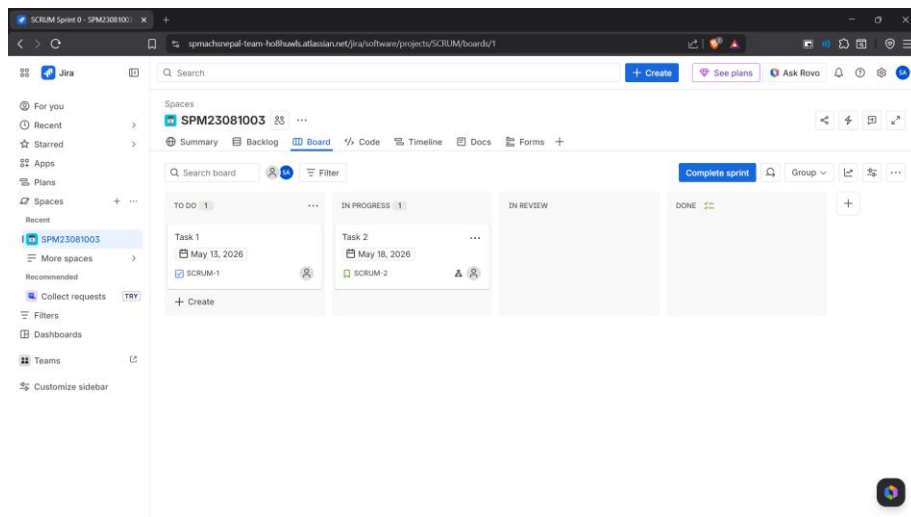

2. Select Scrum Template

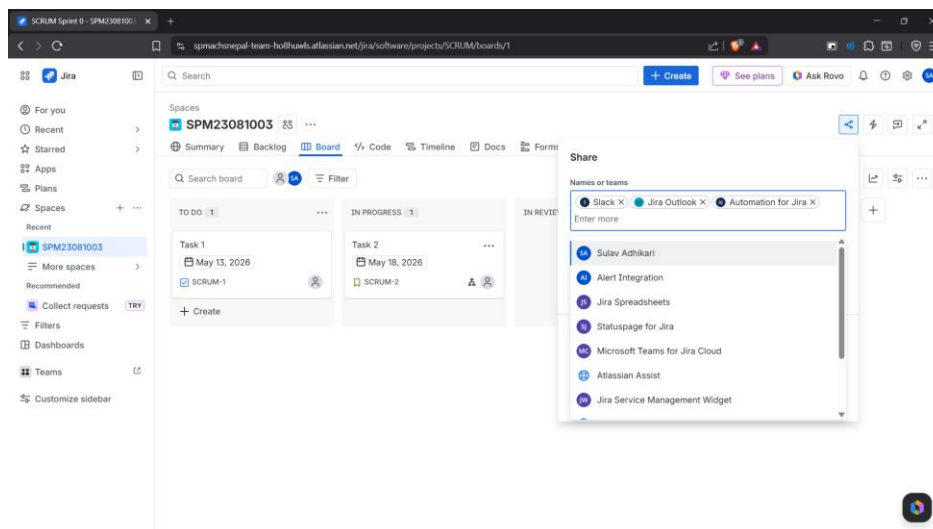

3. Enter Project Name

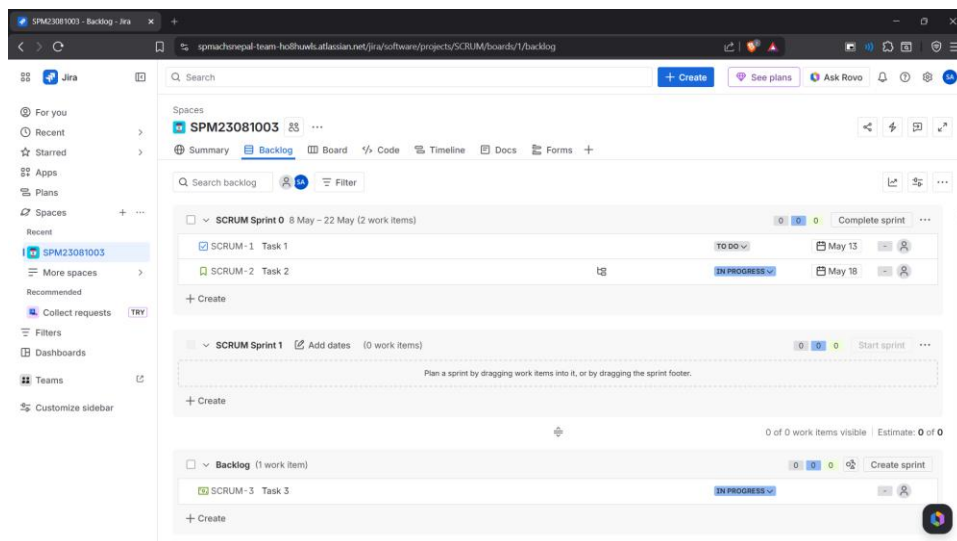

4. Create the Project

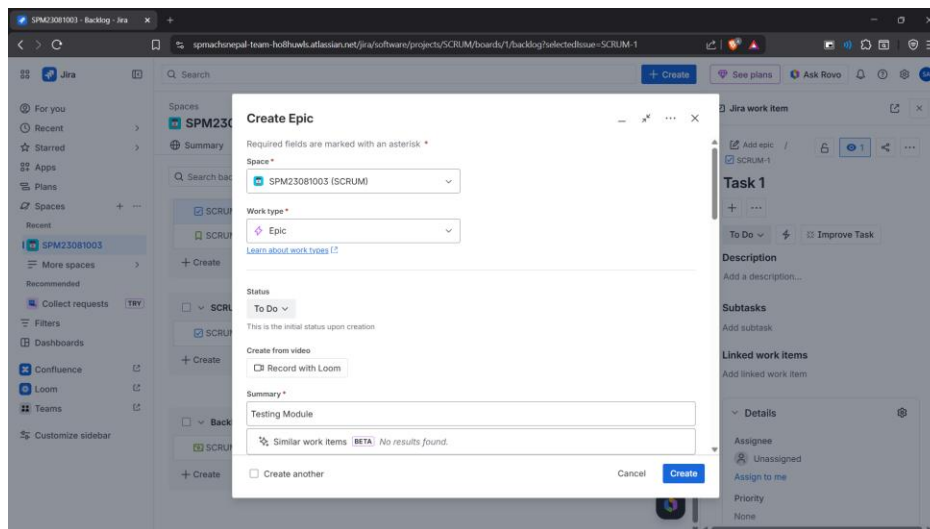

5. Invite Team Members

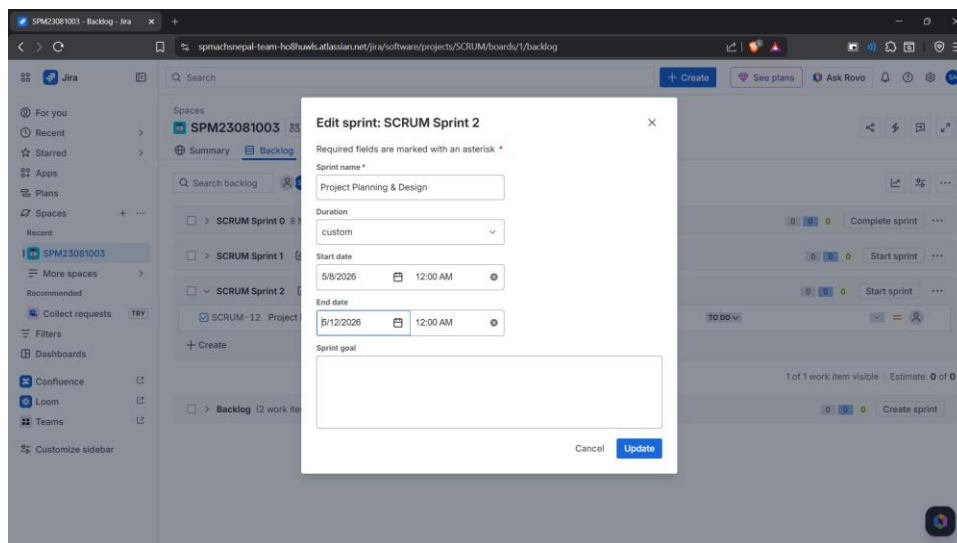

6. Open Backlog Section

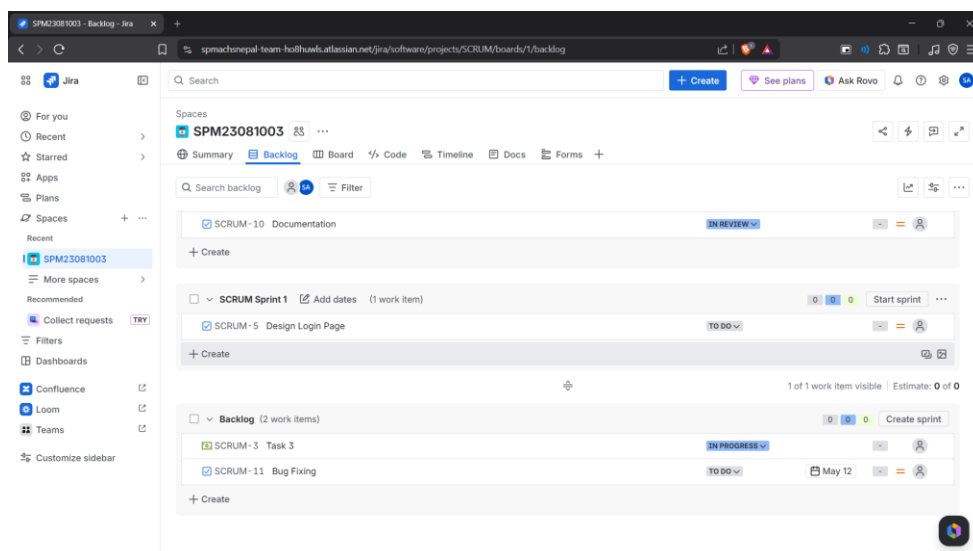

7. Create an Epic

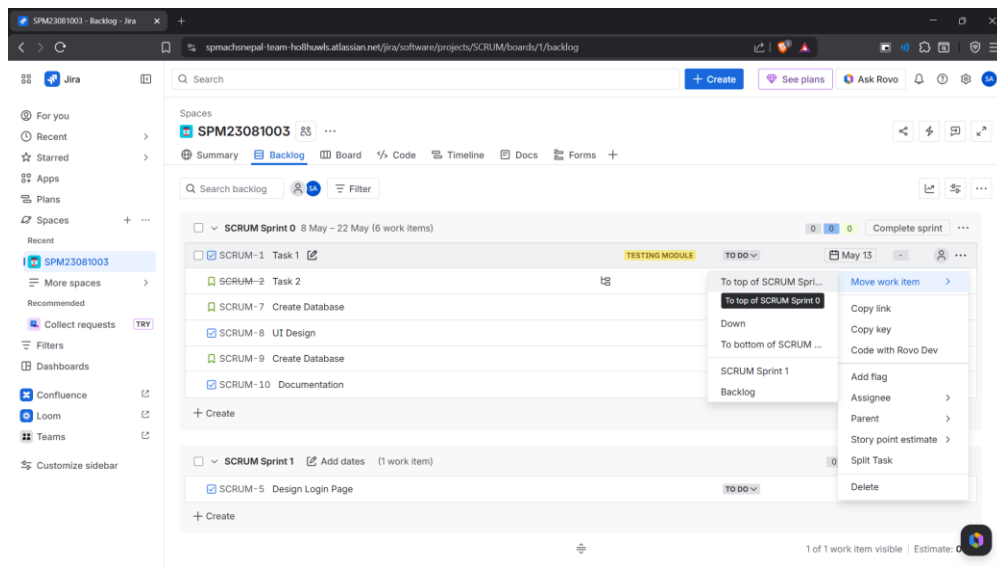

8. Add Start Date and Due Date

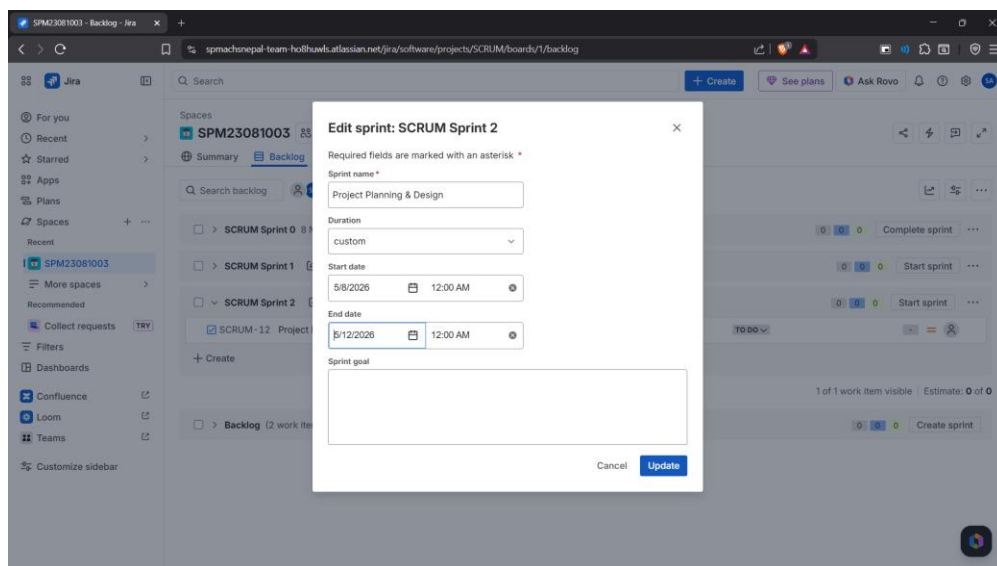

9. Create Stories and Tasks

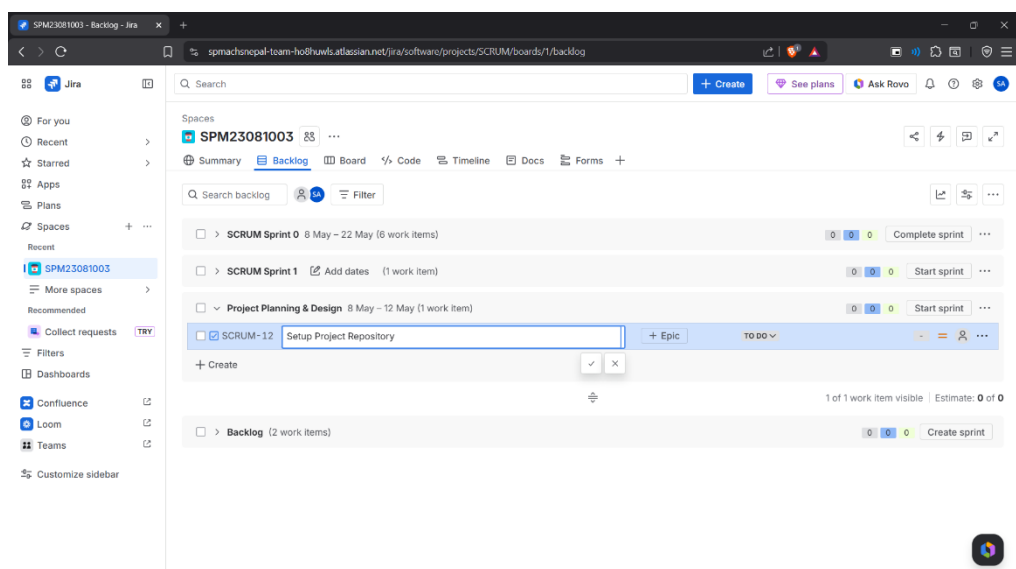

10. Prioritize Backlog Items

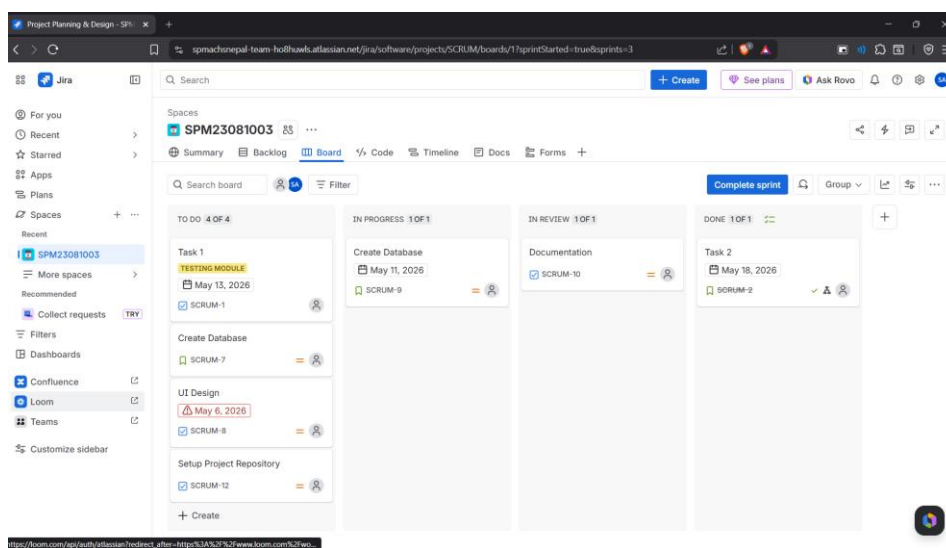

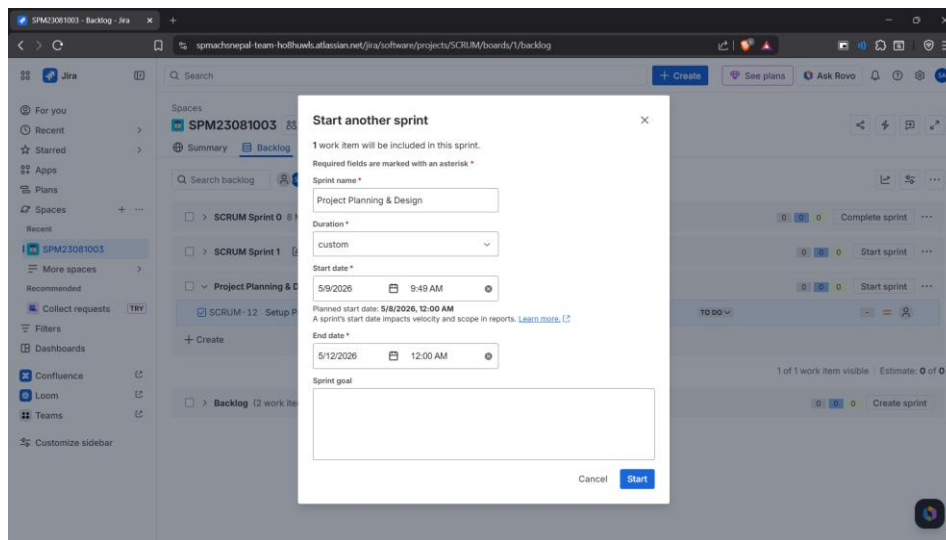

11. Create a Sprint

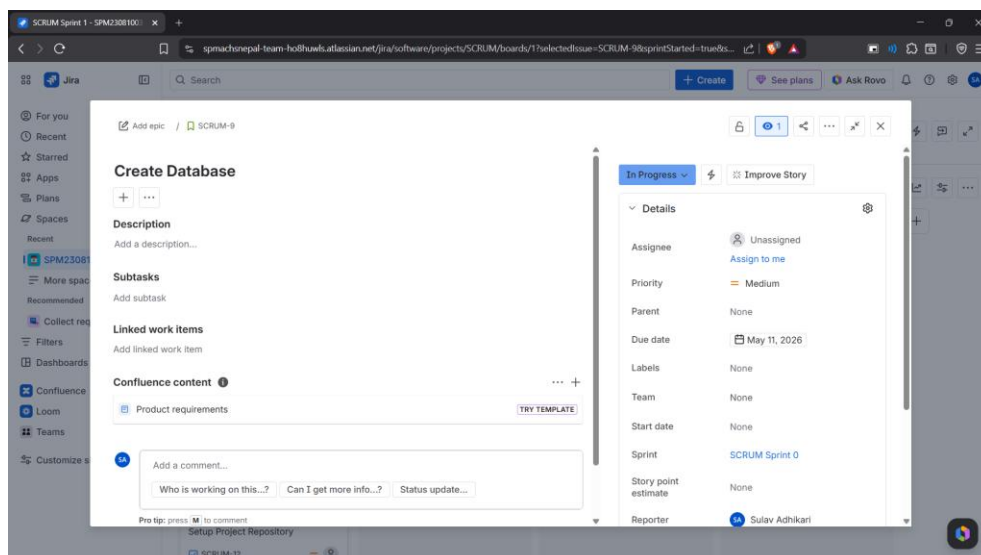

12. Add Tasks to Sprint

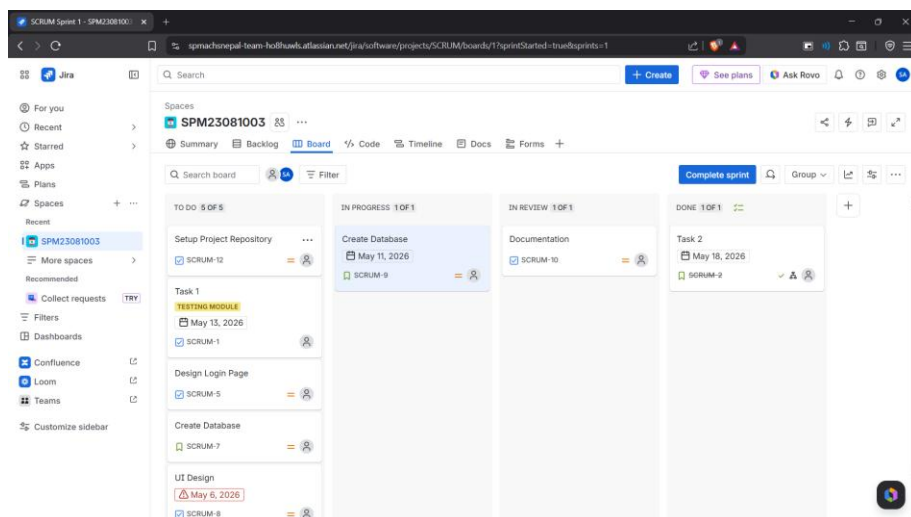

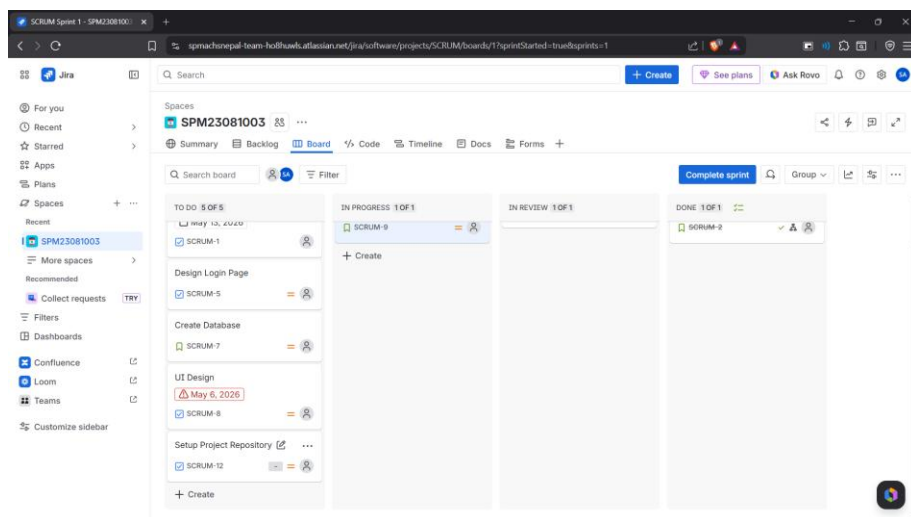

13.Start the Sprint

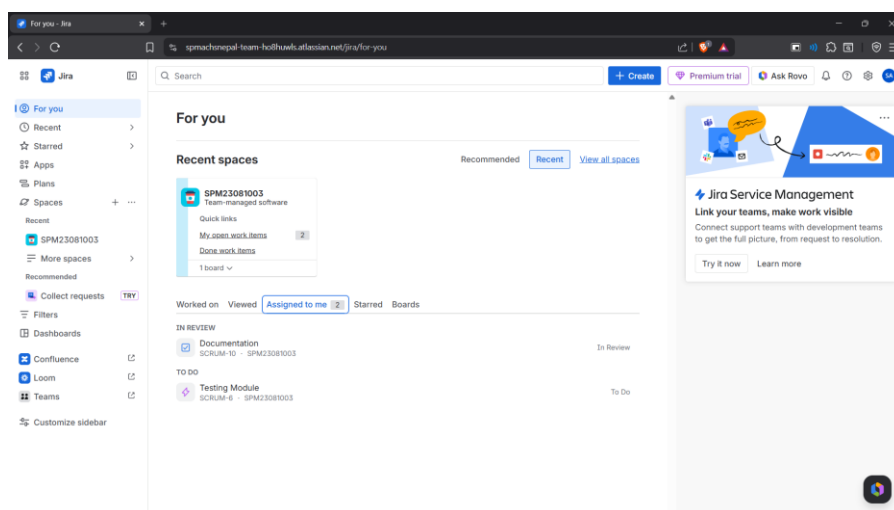

14.Track Progress using Jira Board

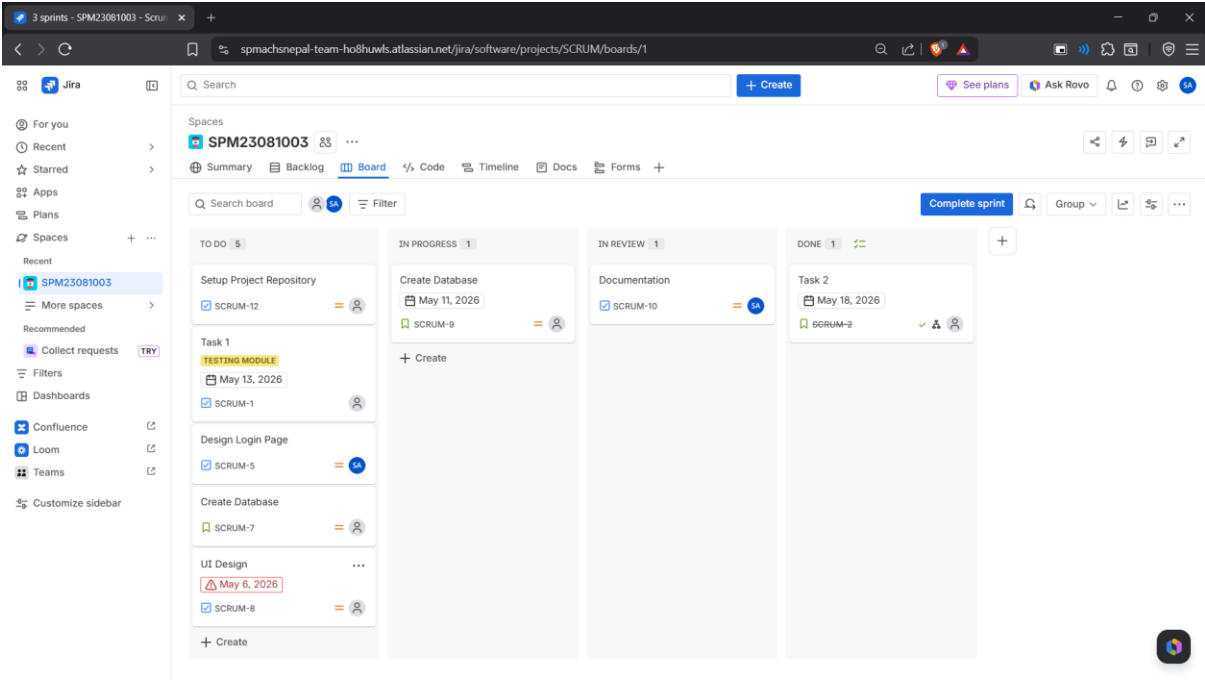

15. Move Tasks across Columns

16. Check Assigned Tasks

17.Final Project Output

Conclusion:

In this lab, Agile project management was performed using Jira. Features such as Scrum projects, backlog management, sprint planning, epics, stories, and task tracking were explored. The lab provided practical knowledge of Agile workflow management and team collaboration using Jira.
